

Letter of Intent

Dear Dr. Ndugu and Team,

This Letter of Intent (LoI) outlines the mutual interest and shared goals between **My Doctor** and **Dr. Nelson Ndugu's team at Makerere University** in establishing a strategic collaboration aimed at improving healthcare access in Uganda through technology, innovation, and joint research.

Both parties recognize the pressing need for scalable, inclusive healthcare solutions in Uganda and the potential for combining academic research and practical digital health innovation. We have identified several priority areas where collaboration can bring immediate and long-term benefits to our communities:

- **Joint development of AI-powered healthcare tools**, including chatbot technologies tailored to the Ugandan context
- **Close collaboration on research and grant applications** in the field of digital health, AI, and public health
- **Student involvement** in My Doctor projects through internships and research placements
- **Co-hosting of health tech hackathons, workshops, and outreach events**
- **Participation in My Doctor community clinics** for research, field data collection, and joint fundraising efforts focused on community-based health initiatives
- **Integration of health and environmental data** for predictive public health modeling

This LoI serves as a good-faith statement of our intention to move forward with the above initiatives. It is not legally binding but expresses a mutual commitment to explore and implement the collaboration in a spirit of partnership, transparency, and shared impact.

We are excited about the opportunity to work with you and your team, and we look forward to developing a strong partnership that benefits both institutions and the communities we serve.

Sincerely,

My Doctor

This Letter of Intent does not constitute a binding agreement but outlines a shared understanding and willingness to collaborate.
